

Lutron Roman Shade Kits

Your fabric, beautifully tailored, with smooth motorized lifting.

Lutron reference imagery reframed for design inspiration.

A Roman fabrication kit provides the motorized lifting foundation for a custom Roman shade. Plumridge coordinates fabric, sewing and mounting with the selected Lutron kit, so the finished shade suits both the room and the control system.

Kit choices	Triathlon battery / Sivoia low-voltage
Fabric	Custom textile; total weight reviewed
Mounting	Inside or outside, with stack allowance
Ordering	Individually specified and quoted

Choose your fabric

Use a textile selected for your room, subject to the shade construction and kit load limits. Lining, interlining and trim contribute to the total lifting weight and are included in the specification.

Battery or low-voltage power

Lutron lists Triathlon Roman fabrication kits with wire-free battery power and Sivoia Roman fabrication kits with low-voltage wiring. We confirm the exact kit, power supply and control compatibility for your project.

Inside or outside mount

Provide the clear opening dimensions and available depth for an inside mount. For an outside mount, decide how much casing and wall the shade should cover. The raised fabric stack affects how much glass remains visible.

Specification and integration

Lutron reference photography, shown for fabric and room inspiration.

Coordinate the whole room

Plan each shade's finished size, lining, control location and grouping together. Your integrator confirms the equipment needed for keypad, scene and app operation.

Access matters

Leave access to the battery compartment or wired power connection. Agree on the headrail position and raised stack before fabrication, especially when the aim is to keep the glass clear.

Can I use my own fabric? Yes, subject to fabric suitability, construction and the selected kit's lifting limits. Send the fabric information and finished dimensions for review.

Does motorization eliminate the folded stack? No. A Roman shade still gathers into folds when raised. The headrail position and stack depth must be included in the design.

Project checklist

- Integrator supplies or specifies the Lutron Roman fabrication kit.
- Plumridge reviews fabric, lining, sewing and the finished lifting weight.
- Agree on mounting, raised stack and battery or power access.

Design Consultation

Share measurements, fabric or heading, track layout, power and the Lutron system.
